SUMMARY

Final-year B.E. student with hands-on experience developing Java and Python applications, RESTful APIs, backend services, relational databases, and full-stack systems. Experienced with Java, Spring Boot, SQL, PostgreSQL, JDBC, React, FastAPI, Git, unit testing, and integration testing. Strong foundation in object-oriented programming, collections, exception handling, inheritance, and interfaces. Seeking entry-level Java Developer, Software Engineer, Backend Developer, and Full-Stack Developer roles.

EXPERIENCE

Java Full Stack Development Intern | Redevelopers Automate Solution Pvt. Ltd. | Feb 2026 - Apr 2026, MP

- Developed and implemented RESTful backend APIs using Java Spring Boot, improving application performance by 30% and reducing server response time by 50%.
- Designed and managed relational database components using SQL and NoSQL technologies for application data persistence.
- Identified and resolved software defects and wrote unit and integration tests to improve application reliability.

PROJECTS

SIP Friction Analyzer | React, TypeScript, FastAPI, PostgreSQL

- Built a full-stack web application using React, TypeScript, and FastAPI to simulate how skipped or reduced SIP contributions affect long-term investment outcomes.
- Refactored duplicated simulation logic into centralized API-based backend processing, establishing a single source of truth for projections.
- Designed a PostgreSQL relational schema linking users, simulation runs, and friction events with foreign keys and constraints, using transactional persistence through SQLAlchemy.
- Implemented JWT authentication, history and reporting endpoints, automated testing, strict TypeScript checking, and SQL query analysis using EXPLAIN ANALYZE.

Dietbot | Python, Scikit-learn, PostgreSQL, Streamlit

- Rebuilt an existing prototype into a modular, tested Python application and fixed two correctness issues.
- Replaced a formula-derived macro prediction model with a calorie-intake prediction pipeline trained on NHANES 2017-2018 data.
- Evaluated multiple approaches against baseline methods; the final Random Forest achieved MAE 633 kcal and R2 0.13 on held-out data.
- Added PostgreSQL persistence for profiles and generated plans, with reproducible model evaluation and documented limitations and provenance.

EDUCATION

Bachelor of Engineering

Minor in Electronics and Communication Engineering | Nitte Meenakshi Institute Of Technology | Bangalore, Karnataka | 2026

CERTIFICATIONS

Kaggle SQL (Intro to SQL and Advanced) | Kaggle | 2026

- Certified in Introduction to SQL, building practical skills in working with and analyzing data using SQL.
- Certified in Advanced SQL, developing the ability to solve complex data problems and extract meaningful insights with SQL.

Java Programming Masterclass - Udemy | Udemy | 2025-26

- Certified in Java Programming, covering Java syntax, OOP, and core programming concepts.
- Developed practical skills in collections, exception handling, inheritance, interfaces, and structured Java programs.

Career Essentials in Data Analysis | Microsoft & LinkedIn | 2026

- Hands-on foundational concepts in data analysis, data gathering and cleaning, quality datasets, and visualization.
- Software tools: Power BI, Python, Excel, and PostgreSQL.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, TypeScript, HTML, CSS

Frameworks: Spring Boot, FastAPI, React.js, Streamlit

Software Engineering: RESTful API development, backend development, full-stack development, unit testing, integration testing, automated testing, debugging

Databases: PostgreSQL, JDBC, relational databases, SQL, NoSQL, database schema design, transactional persistence

Java & Core Concepts: Object-Oriented Programming, Collections, Exception Handling, Inheritance, Interfaces

Developer Tools: Git, GitHub, IntelliJ IDEA, Visual Studio Code, Postman, Swagger UI

Libraries & Analytics: Pandas, NumPy, Scikit-learn, Power BI, Excel
