Bengaluru, Karnataka | B.E. Electronics and Communication, NMIT | 2026 graduate

SUMMARY

2026 Electronics and Communication graduate looking for an entry-level Python Software Engineer role. I build backend services in Python: REST APIs with FastAPI, data stored in PostgreSQL, and automated tests that run on every code change. Both projects below are live: an investment simulator that saves each run in one database transaction, and a tracker of UPI payment failures at India's 50 busiest banks that answers questions asked in plain English. Three-month full stack internship in Java Spring Boot; Kaggle-certified in Intro and Advanced SQL.

TECHNICAL SKILLS

Languages: Python, SQL, Java, JavaScript, TypeScript
Python: FastAPI, Pydantic, SQLAlchemy, pandas, pytest
Backend: REST APIs, JWT sign-in, request validation, database transactions; Java Spring Boot (internship)
Databases: PostgreSQL (table design, indexes, query plans), MySQL, DuckDB
Delivery and tools: GitHub Actions CI, deploys on Render, Git, VS Code; React for front ends

PROJECTS

SIP Friction Analyzer: Investment Simulator | Python, FastAPI, PostgreSQL, SQLAlchemy, React, TypeScript
sip-friction-analyzer.onrender.com | github.com/Anubhavkumarkanth/sip-friction-analyzer

- Shows people who invest every month (a SIP) what skipping, cutting or pausing payments costs them by the end of the plan: the final value, the money lost to missed compounding and a 0-100 discipline score.
- Built the backend in Python with FastAPI: it checks each request, runs the calculation and saves the run with its events to PostgreSQL in one transaction, so a run is never stored without its events. Users sign in with JWT tokens and see only their own runs.
- Wrote the calculation engine and a Monte Carlo mode that plays out 1,000 random return paths and reports the 10th, 50th and 90th percentile outcomes. Checked by hand: skipping month 2 of a 5,000-a-month plan at 12% leaves 5,578 less after a year, matching the app.
- Designed the tables (users, runs, events) with foreign keys, cascading deletes and value checks; an index cut the per-user history query from about 0.8 ms to 0.06 ms on 20,000 rows.
- Wrote the SQL behind a per-user report of which kind of missed payment costs most: it joins events to runs, groups by event type, counts distinct runs and labels the size of the loss with a CASE band.
- Removed a second copy of the calculation from the React front end, so one backend decides every result. Covered by 55 backend tests, 34 of them against a real PostgreSQL database, and 38 front-end tests.

UPI Pulse: UPI Reliability Tracker | Python, pandas, DuckDB, SQL, pytest, FastAPI, Gemini API
anubhavkumarkanth.github.io/upi-pulse | github.com/Anubhavkumarkanth/upi-pulse

- A live site showing which of India's 50 busiest banks fail UPI payments most, month by month, built from NPCI's monthly reports (Jan 2022 to Sep 2026, 5,699 bank-months).
- Wrote the Python and DuckDB pipeline that merges NPCI's inconsistent bank names into one name per bank. 50 automatic checks run before every update and in GitHub Actions; they caught a mistake in NPCI's own figures (August 2022 rates missing the decimal point).
- Built a question box as a FastAPI service: you ask in plain English, an AI model writes the database query and code checks it before it runs (30 of 30 test questions right). The monthly AI summary is published only if every number in it matches the data.
- Wrote the rule that flags a bank's unusual months (about 3% of bank-months, with 1.15% false alarms on simulated stable banks) and a calculator that estimates a shop's failed payments.

EXPERIENCE

Full Stack Development Intern | Redevelopers Automate Solution Pvt. Ltd. | Feb 2026 - Apr 2026

- Built REST APIs in Java Spring Boot and designed the database side of the application, in SQL and NoSQL.
- Found and fixed defects, and wrote unit and integration tests to make the application more reliable.

EDUCATION

Bachelor of Engineering (B.E.), Electronics and Communication Engineering
Nitte Meenakshi Institute of Technology (NMIT), Bengaluru | Aug 2022 - Aug 2026

CERTIFICATIONS

Kaggle: Intro to SQL and Advanced SQL | 2026
